

CUSTOMER INVENTORY AND DAILY EXPENSES APP

ABOUT ME

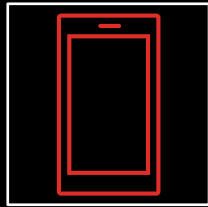

- Studying Industrial Mathematics at the University of Benin.
- Been building Power Platform since November 2021.
- Currently helping people learn and build solutions with Microsoft's Power Platform.

THE IDEA

To help avoid misplacing the notes used for data entry or the papers getting torn

For easy access and the Manager to monitor the services and expenses made a day.

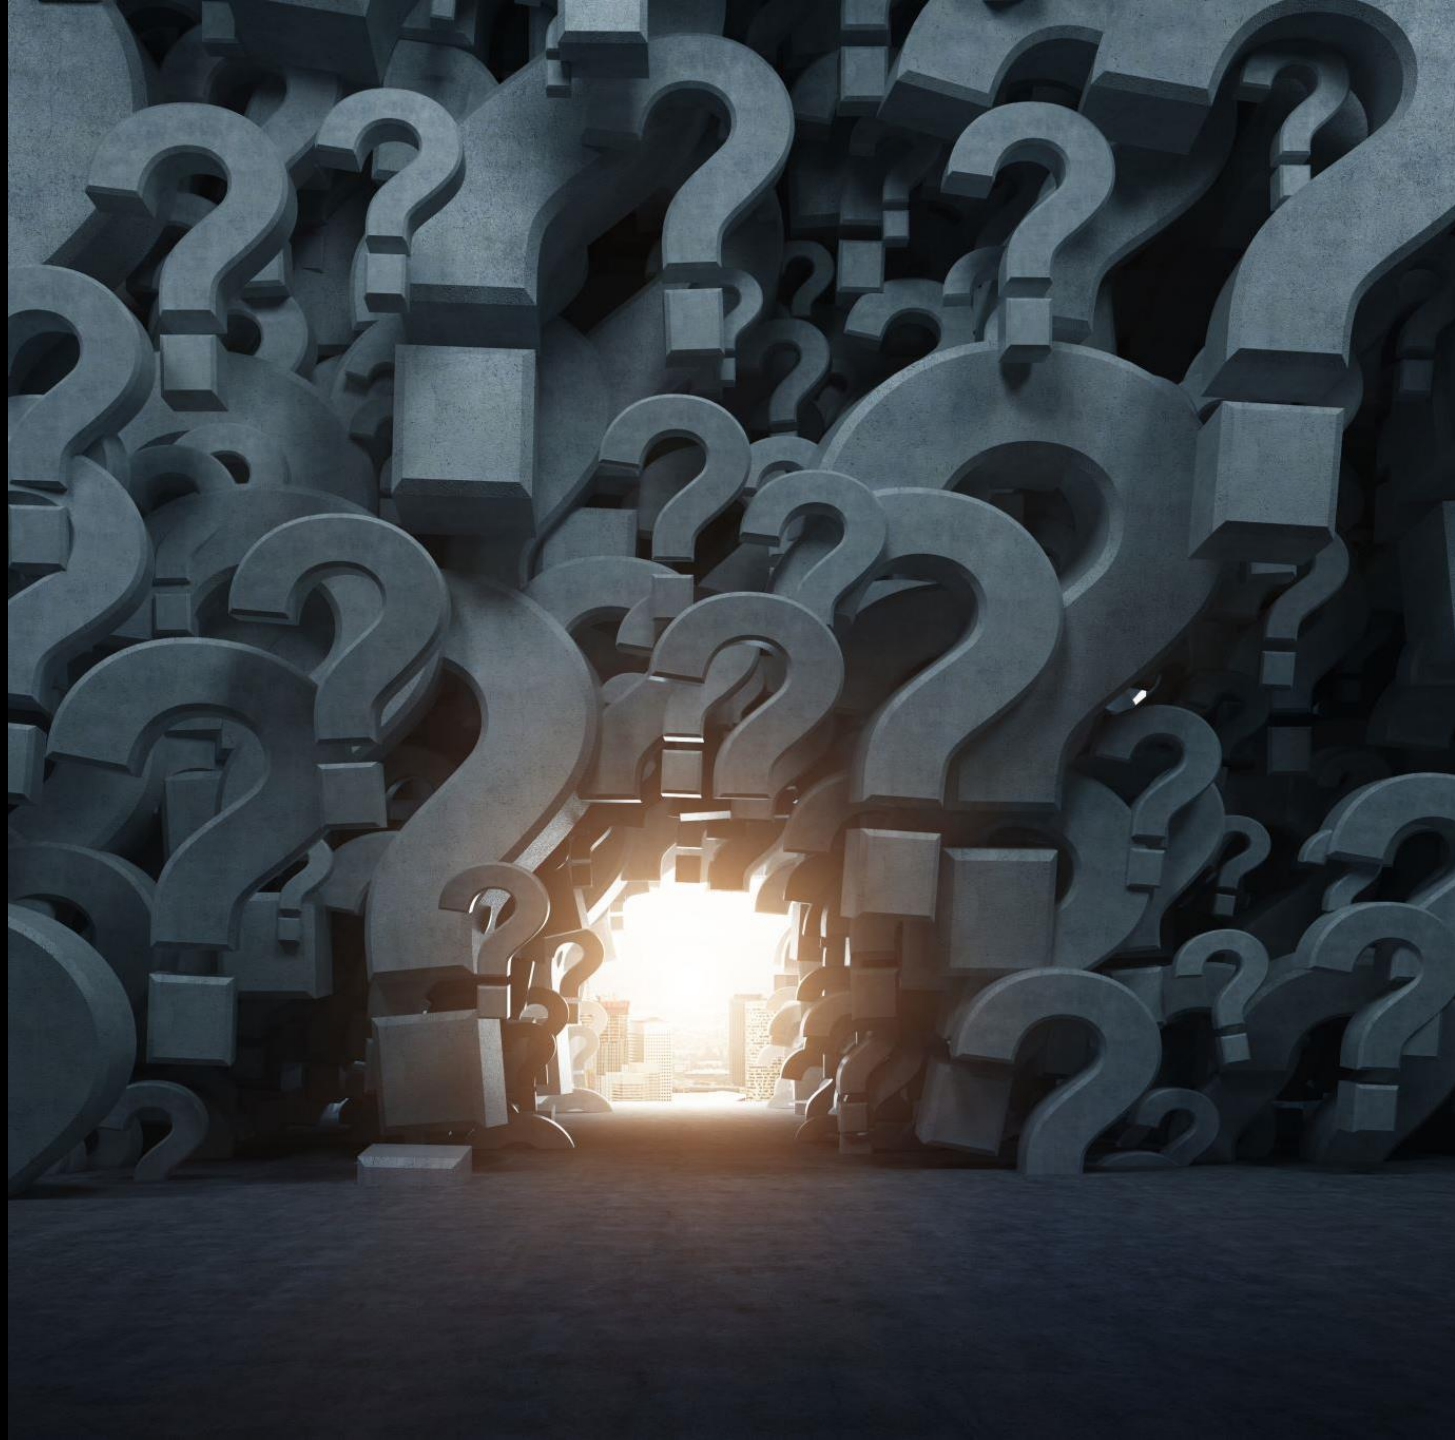

To track the daily expenses made in day.

THE PROBLEM

- The processes the Laundry Company used in recording the expenses made for a day, the entry of data of a customer and the different prices of their services.

TOOLS USED

Dataverse

Power
Apps

Power
Automate

SOLUTION OVERVIEW

Dataverse is used as the primary database for the App.

Building Customer Inventory and Daily Expenses App using Power Apps.

Power Automate is used within the App environment to create a push notification to the manager App each time a record is added.

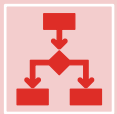

SOLUTION

Helps give each employee access to entering data.

To keep records of the data of customers efficiently and monitor the service if it has been completed.

Helps resolves the issue of buying new notes and the note getting missing.

Helps keep track of old records of Customers.

Thank you
