

Migrate your SharePoint workflows to Power Automate

With migration tooling (preview)

By Zac Sun, Principal Product Manager of ODSP Migration

Modernize your legacy workflow

Power Automate is the new generation workflow engine in Microsoft365. We have released a new feature on top of SharePoint Migration Tool to support migrating SharePoint workflow to Power Automate.

What can you do with SPMT preview build

Using the SharePoint Migration Tool (SPMT), you can now migrate:

Public preview

- SharePoint Server 2010 out of the box (OOTB) **approval** and **collect feedback** workflows to Power Automate.
- List and library workflow, content-type workflow
- Workflow definitions and associations (not workflow history data)

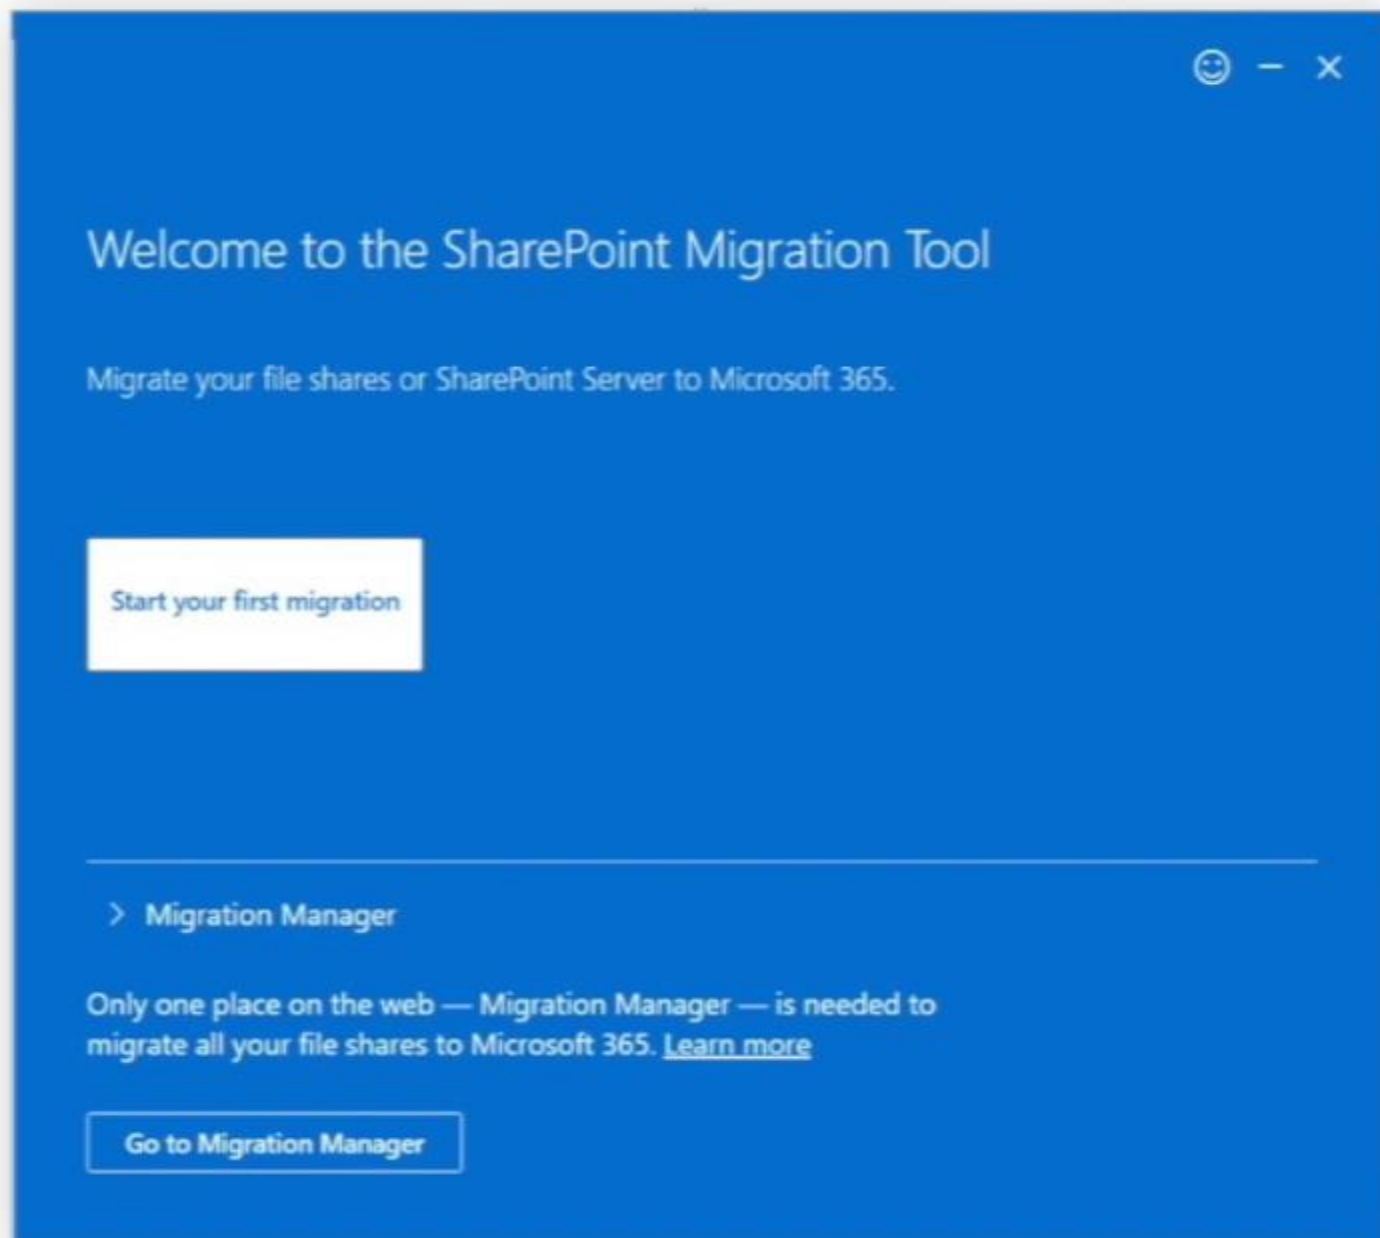

Private preview 1

- SharePoint Server 2010 and 2013 **Designer** (SPD) workflows to Power Automate

SharePoint Migration Tool
