

# Microsoft identity platform

## Developer community call

Deep dive on using MSAL Node to integrate Electron desktop applications with Azure AD

October 20, 2022 | 9:00AM PST

Emily Lauber  
Product Manager

Dogan Erisen  
Software Engineer

Salman Salem  
Software Engineer

# Introduction

- First things first
  - Please note: **We are recording this call** so those unable to attend can benefit from the recording.
  - This call is designed for developers who implement or are interested in implementing Microsoft identity platform solutions.
- What kind of topics will we discuss?
  - We will address development related topics submitted to us by the community for discussion.
  - We build a pipeline of topics for the next few weeks, please submit your feedback and topic suggestions - <https://aka.ms/IDDevCommunityCallSurvey>
  - View recordings on the Microsoft 365 Developer YouTube channel - <https://aka.ms/M365PnP/videos>
  - Follow us on Twitter **@Microsoft365Dev** and **@azuread**
  - This is NOT a support channel. Please use Stack Overflow to ask your immediate support related questions.
- When is the next session?
  - Community Calls: Monthly – 3<sup>rd</sup> Thursday of every month

# Microsoft identity platform Community call

20th of October 2022

## Microsoft identity platform

### Developer community call

Deep dive on using MSAL Node to  
integrate Electron desktop  
applications with Azure AD

October 20, 2022 | 9:00AM PST

# Agenda

- Overview of MSAL Node
- OAuth 2.0 native app best practices
- Enabling single sign-on (SSO)
- Acquiring a token for Microsoft Graph
- Calling Microsoft Graph
- Q & A

# Microsoft Authentication Library for JavaScript

## MSAL.js Package Structure

- Client-side apps (public client)
- Server-side apps (confidential client)
- Authorization Code Grant with PKCE
- Client Credentials Grant
- Device Code Grant
- On-behalf-of Grant
- ROPC Grant
- OpenID-compliant

# MSAL Node

- Supports public and confidential client applications
- Follows support schedule of Node.js project for even-numbered stable releases

# Use MSAL Node in your applications

- Step 1: Download a code sample or two ([aka.ms/aadcodesamples](https://aka.ms/aadcodesamples))
- Step 2: Register your app on Azure AD ([portal.azure.com](https://portal.azure.com))
- Step 3: Start coding!

[github.com/Azure-Samples/ms-identity-javascript-nodejs-desktop](https://github.com/Azure-Samples/ms-identity-javascript-nodejs-desktop)

## Prerequisites

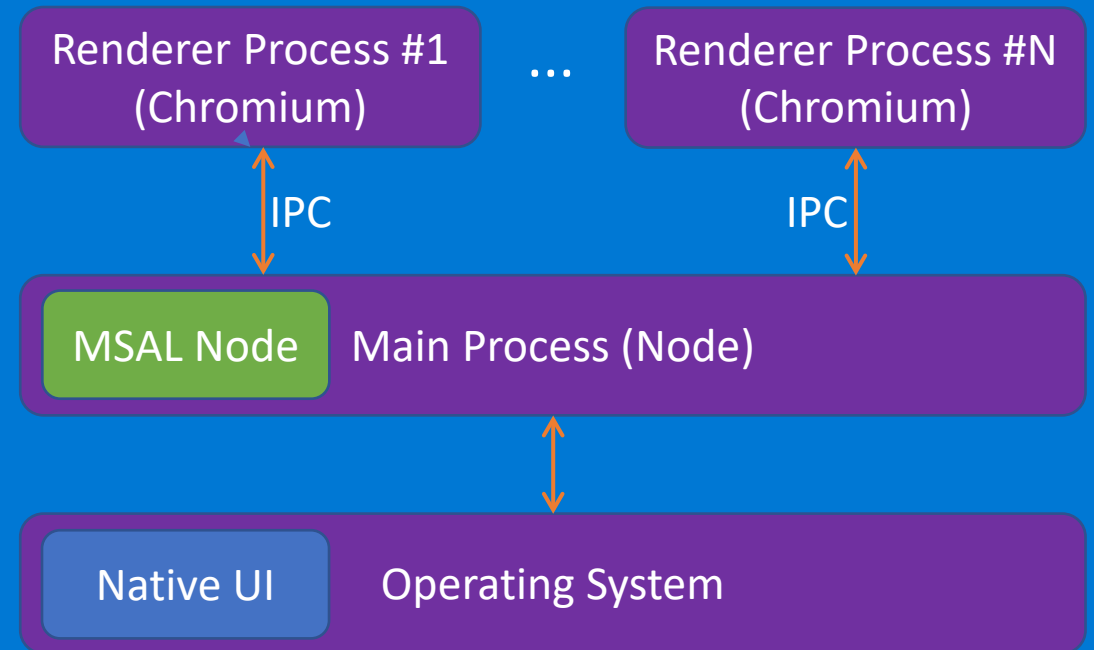

- Node.js v14+
- An Azure AD tenant

[github.com/Azure-Samples/ms-identity-javascript-nodejs-desktop](https://github.com/Azure-Samples/ms-identity-javascript-nodejs-desktop)

# OAuth 2.0, Electron and MSAL

# Electron.js

- Build cross-platform native desktop applications
- Main process vs Renderer process(es)
- Inter-process communication (IPC)

# OAuth 2.0 Desktop App Best practices (RFC 8252)

- MUST implement Proof Key for Code Exchange (PKCE)
- RECOMMENDED to use external user-agent for auth requests
- Redirect URI options:
  - Private URI Scheme (e.g. `com.example.app:/oauth2redirect/example-provider`)
  - Loopback Redirect (e.g. `http://127.0.0.1` or `localhost`)

Enabling single sign-on

# Single sign-on between multiple apps

- If the user has an active session with Azure AD and tries to sign-in to an app using MSAL, they may automatically sign-in without entering their credentials again.
- If the user has multiple active sessions with Azure AD, then the user is prompted to pick an account to sign in with
  - To bypass account selection screen, use a **loginHint**:
    - Session Id (sid)
    - login\_hint (e.g. upn or preferred\_username)
    - MSAL account object

# AuthZ via External User-Agent

<https://www.rfc-editor.org/rfc/rfc8252>

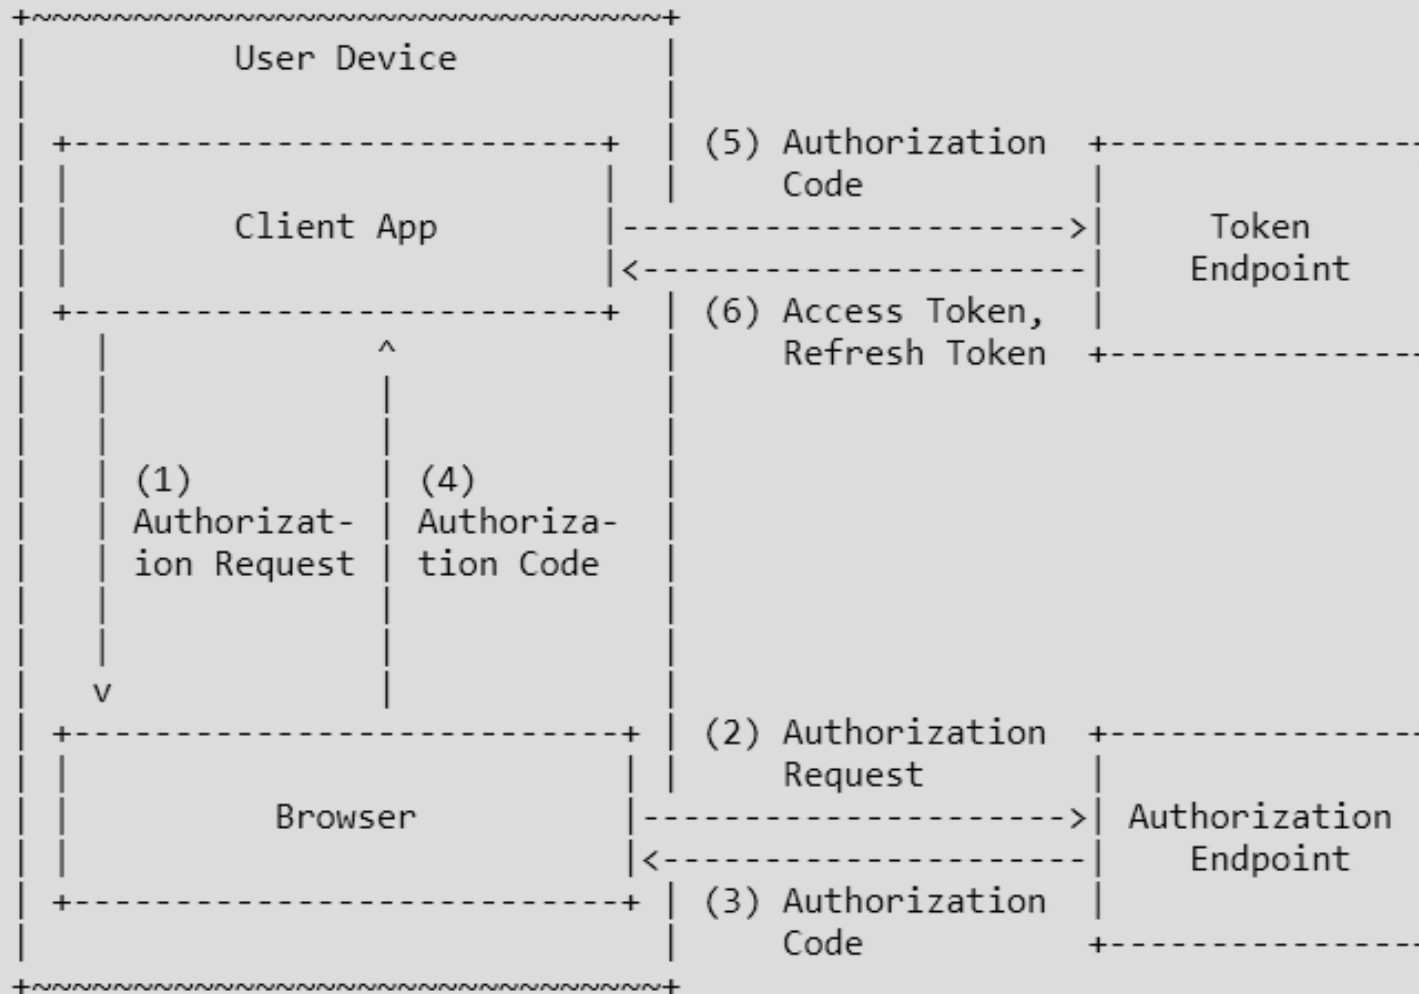

Figure 1: Native App Authorization via an External User-Agent

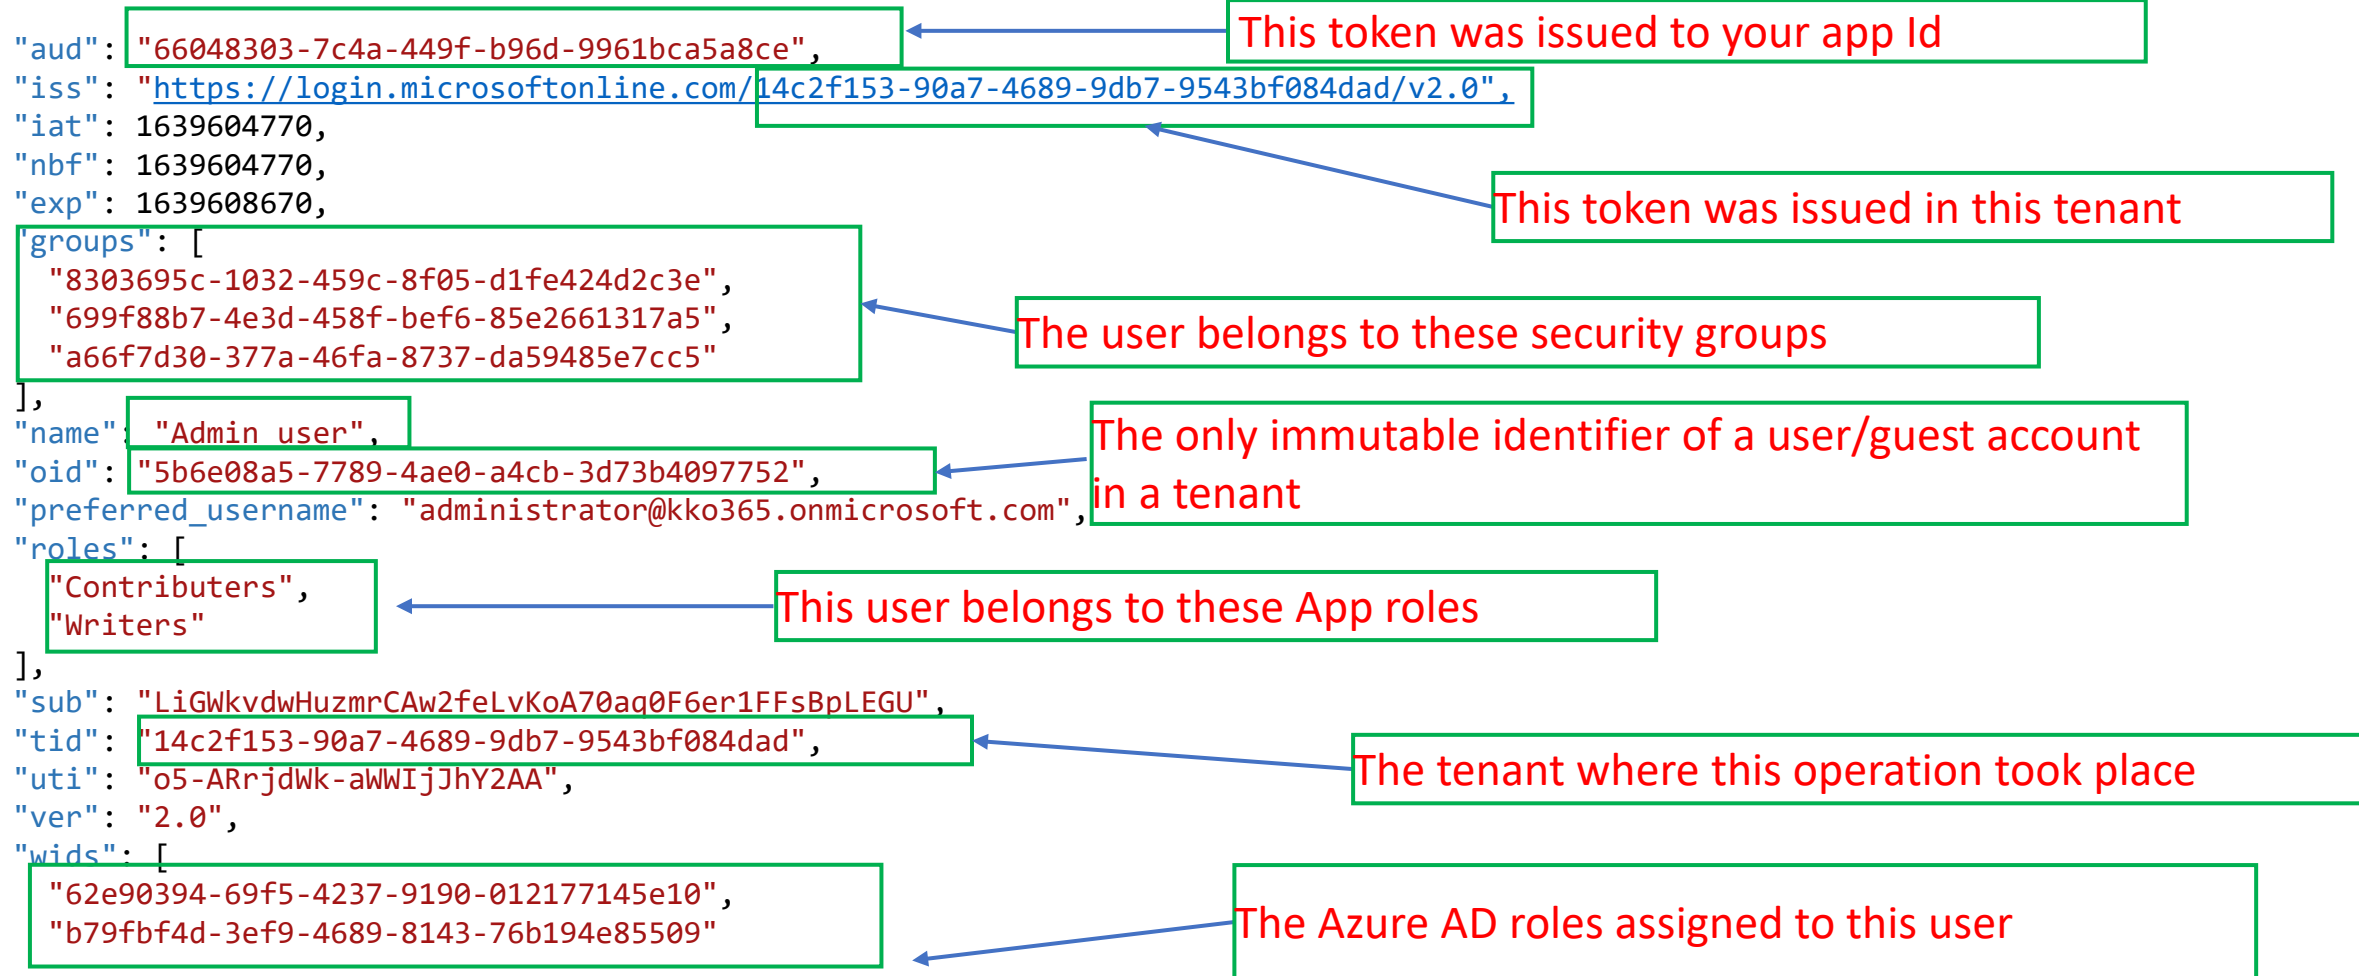

- (1) Client app opens browser tab with authorization request.
- (2) Authorization endpoint receives the authorization request, authenticates the user, and obtains authorization.
- (3) Authorization server issues an authorization code to the redirect URI.
- (4) Client receives the authorization code from the redirect URI.
- (5) Client app presents the authorization code at the token endpoint.
- (6) Token endpoint validates the authorization code and issues the tokens requested.

Questions?

ID Token

# Learn and use claims provided in tokens

Questions?

Get an access token for Microsoft Graph

# Microsoft Graph SDK

- Why use Graph SDK?

- Simplify building high-quality, efficient, and resilient applications that access Microsoft Graph.
  - support for retry handling
  - payload compression
  - paging through collections
  - creating batch requests

- Ways of using Graph SDK

Create With ClientOptions	Create With Options
<pre>let clientOptions = {     authProvider: new AuthProviderClass() };  const client = Client.initWithMiddleware(clientOptions);</pre>	<pre>Let authProvider = (callback) =&gt; {     callback(error, accessToken); };  let options = { authProvider }; const client = Client.init(options);</pre>

# Calling Microsoft Graph

1. Instantiate the Graph SDK Client
  - Obtain an access token with MSAL and pass it to the SDK
2. Call the /me endpoint to access user's profile
  - Required permissions: User.Read

Q & A
