What is Fantasy Premier League (FPL)?

- Pick a squad from a list of players

- Sell/Buy players each week (1 free)

- Each game-week you're given points based on your players performance

- Your weekly points are added to your total points

- Each game-week the leaderboard for your league gets updated

- At the end of the season the highest points on a team in a league wins that league

The Process

Power Automate Independent Connector requests information

FPL responds to the request passing back JSON

Power Automate Independent Connector receives data & sends to Microsoft Teams

Microsoft Teams receives data and displays message to users

The Actions

Classic League Standings provides all the information about your league

Fixtures provides past and upcoming fixtures including results

Game Week Live data provides a break down of data by game week

General Information provides data such as Team of the Week, transfers etc

Managers Basic Information will provide you with the information on a manager (user), such as first and last name, team names, leagues and more

Mangers History provides you with a breakdown of the points gained, transfers made and more by a specific (user) manager

Players Detailed Data allows you to get all the latest information on specific players

Review & More

We looked at how easily it was to;

Gather league information
Create a table from that information
Send that information to a Teams chat

We also saw how you can get more complex information, manipulate it and send to a Teams chat
